

Dissertation:

Dialect diversity in south-eastern Ju varieties: Documentation of †X'ao-ll'aen

THE HANS RAUSING
Endangered Languages Project
*Because every last word means
another lost world...*

Presentation Overview

- Review of ǀX'ao-ǁ'āen & Language Situation
- Multi-Site Documentation: the 'Community'
- Cross-Khoesan Contact

Lexical Evidence

Morphosyntactic Evidence

Phonological Evidence

Extra-linguistic Evidence

- Next Step

Review of ǀX'ao-ǁ'āen & Language Situation

E3 ꠗX'ao-ll'aen

Review of †X'ao-ll'aen & Language Situation

Multiple-Site Documentation: define the 'Community'

Divergence-Convergence-Contact

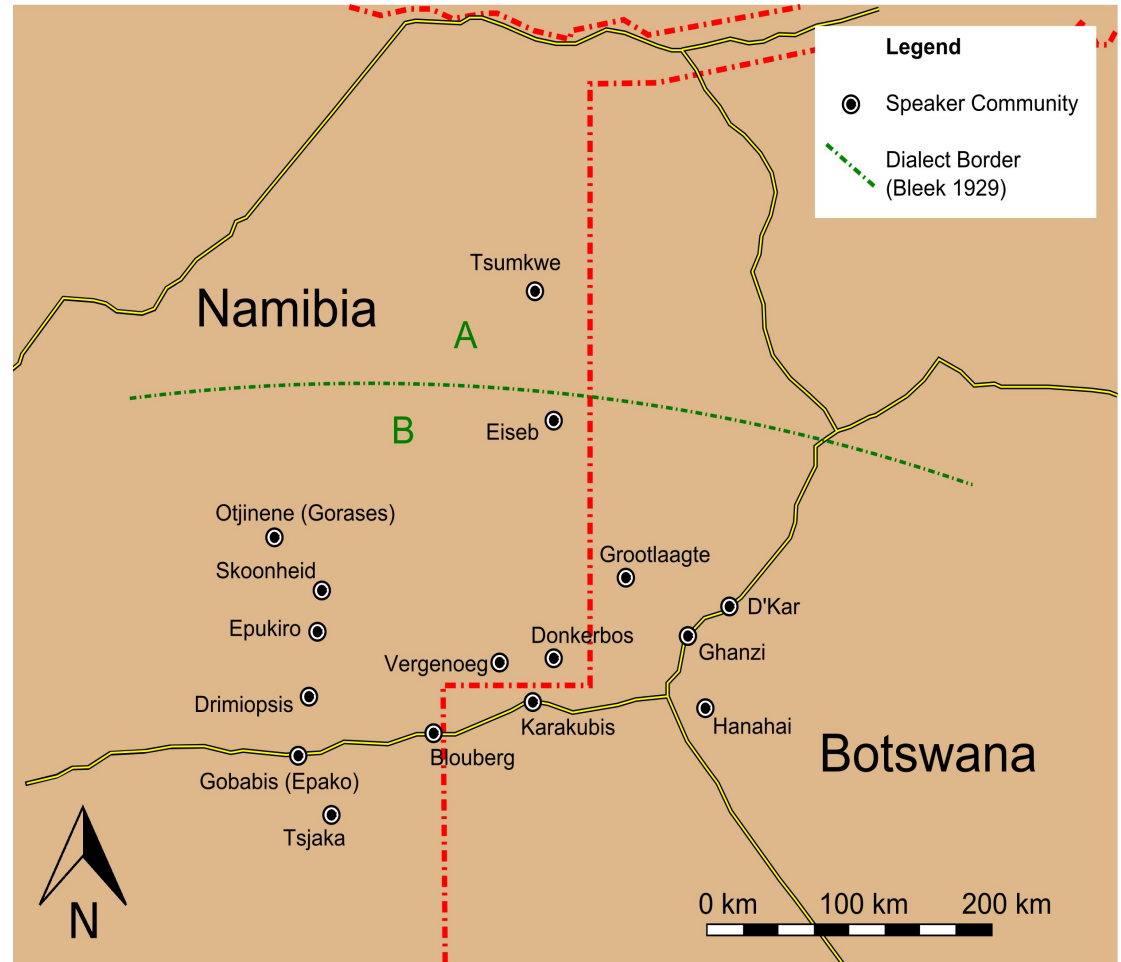

Next Step

†X'ao-ll'aen (also †Kx'au-ll'ein, llau-ll'en)

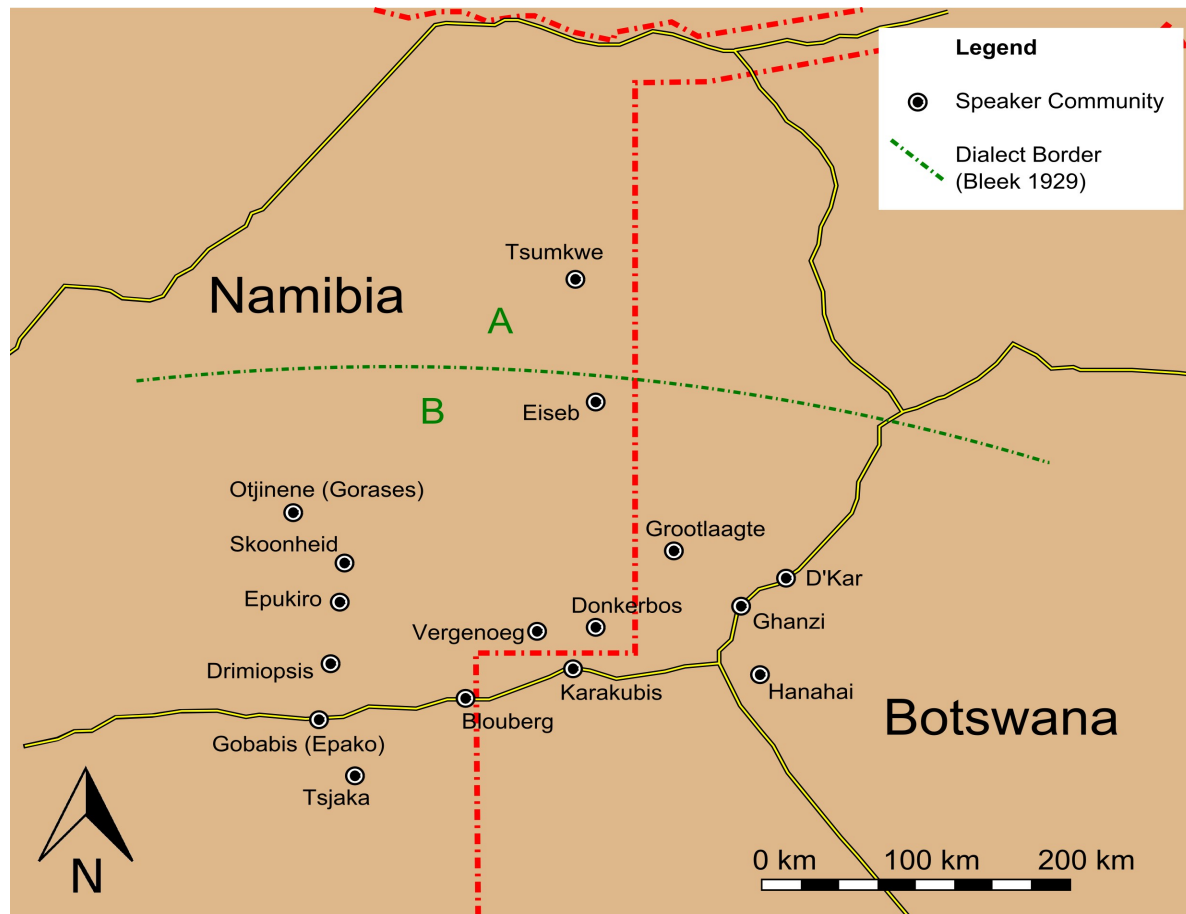

- iso: [aue]
- Other names: Auen, lAuen, Kaukau, Sekaukau, Jul'hoan
- SAK Hunter-gatherers
- †X'ao-ll'aen: Naro (Khoe-Kwadi) exonym meaning “people of the north”
- Self-identify as *Jul'hoan* “true people” in most parts of Namibia and as †X'ao-ll'aen in Botswana

Review of ǀX'ao-ǁ'ae'n & Language Situation
Multiple-Site Documentation: define the 'Community'
Divergence-Convergence-Contact
Next Step

- 11 different sites so far
- Trips to Tsumkwe, Eiseb, Hanahai & farms in the Ghanzi farming block planned
- Varying sociolinguistic factors at each site

- Challenges of defining “the community”?

Summary of Results: Jul'hoan (E1) vs. †X'ao-ll'aen (E3)

- considerable lexical divergence*
- syntactic divergence *
- phonological divergence*

*Based on Jul'hoan dictionary & Jul'hoan grammar (Dickens 1994, 1995)

Data: KBA 700 wordlist, Groot Laagte, Botswana (2012); Biesele et al. 2009; Dickens 1994, 1995

Review of ʔX'ao-ll'aen & Language Situation
Multiple-Site Documentation: define the 'Community'
Divergence-Convergence-Contact: Lexicon
Next Step

Lexical Divergence

Lexical Divergence between E1 and E3:

- majority of lexemes surveyed are cognates in E1 and E3
- for some semantic domains close to 100% cognates (body parts)

| | E1 | E3 | !Xun |
|-------|-----------|-----------|--------|
| Cheek | !omm/glam | !'obikxai | glàh̄ŋ |

- some semantic domains (food/animal husbandry) can be explained by considering contact with hunter-gatherer and pastoralist groups

Review of †X'ao-ll'aen & Language Situation
 Multiple-Site Documentation: define the 'Community'
Divergence-Convergence-Contact: Lexicon
 Next Step

| | E1 | E3 | | E1 | E3 |
|--------------------|-----------|-------------------|--------------------|-----------|---------------|

 Multiple-Site Documentation: define the 'Community'
Divergence-Convergence-Contact: Lexicon
 Next Step

| | E3 | Naro | | E3 | Naro |
|--------------------|------------|-------------------|--------------------|-----------|---------------|
| <i>to curse</i> | lxui | lxui | <i>wind</i> | ʔ'ang | ʔ'aan |
| <i>to teach</i> | llxanllxan | llxanllxan | <i>to chat</i> | lhoa | lhoa |
| <i>to be tired</i> | ll'hui | ll'hoe | <i>to g. birth</i> | maq | |
| <i>calabash</i> | xaba | kx'aba | <i>pig</i> | llxuu | llxuu |
| <i>bull</i> | lloo | lloo | <i>stick</i> | gllom | gllom |
| <i>potato</i> | ll'ore | ll'ore | <i>PP</i> | mama | mama |
| <i>to shut</i> | ʔ'ainkxam | ʔ'enkxam | <i>to open</i> | llxabe | llxobe |

Preliminary Conclusions:

- Naro possibly the source of lexical divergence between E1 and E3?
- Groot Laagte extreme example of contact situation with Naro.
Less lexical diffusion in other communities?

Divergence-Convergence-Contact: Syntax

Next Step

Syntactic Divergence

Morphosyntactic Convergence? ʔX'ao-ll'aen & Naro

Naro xae: question marker (the speaker is unsatisfied in a sense) (Visser 2001)

Variations: bae <ba xae

- (2a) dii **ba xae**?
 who Q
 who? Who are you talking about?
- (2b) khoe ne **xae** nde ?
 people they Q where
 where are the people?
- (2c) llkx'uu me tsi **xae** haa?
 cook a liittle bit him you Q PST
 Did you cook a little bit?
- (2d) oe -a **ba xaa**?
 b.broken -? Q
 Is it broken?

(adapted from Visser 2001)

Negation morpheme: *tama*, Negation marker (Visser 2001)

- (3a) *ka zi hin tsi !'au ka ha tsi glae se tama*
? faeces DEM REL call but 2S come arrive see NEG
The shit there called out and she came there but didn't see (the people) (Biesele 1971:63)

NB. word order, compared to normal position of negation marker *loa*

- (3b) *ha m loa tsi* or (3c) *ha m loa kx'ae gla'a-si*
2S ? NEG come 2S ? NEG have eye-PL
She is not coming

maq tama 'miscarry' (Dickens 1994)

- (3d) *kaam uu tama*
he does not lie (Visser 2001:33)

Discourse markers: khama

(4a) *mtsa m lla'i la llkae khoe m #aun ka m kore khama*
3DU.EXCL ? today NEG meet together 1S to have to ? look after because
We cannot meet today, because I have care for the herd.

(4b) *mi m !ka m la nla'n m!a m koara nlai khama*
1S.POSS ? heart ? NEG good 3PL.INCL ? be absent oil because
I am sorry, we have no oil.

(4c) *mi n/e'e ha khama ha te cu /xoa mi dshau*
1S b.angry 2S because 2S ? lay COM 1S.POSS wife
I am angry, because he slept with my wife. (Dickens 1994)

(4d) *mi glutzi txatxabe khama mi te ||abeh*
1S.POSS stomach be small because 1S ? be hungry
My stomach is small because I am hungry (Dickens 1994)

(4e) Naro *tsane tsir ko cg'uriga tsi i khama* (Visser 2001)
I don't like you, because you are dirty

Khoem ncee ba c'oo kg'ama, cama ba khama (Visser 2001)
This man has a dry mouth because he is thirsty

Review of †X'ao-ll'aen & Language Situation
Multiple-Site Documentation: define the 'Community'

Divergence-Convergence-Contact: Syntax

Next Step

Phonological Divergence

Explaining Divergence: Click lenition

CL + [x] → CL + [h]

Example 'garden/field'

E1 ǁxara

E3 ǁhara

Naro ǁhara

Affricate accompaniment → Aspirate accompaniment

ǁxara probably older form: diffusion from Kx'a into Naro (Khoe)

Complex click-cluster: gCL + [x]

to snore: gꞤxonu (E3) [+ voice] vs. Ꞥxono (Naro)

Complex click-cluster: gCL + [kx'] [x] [h] → voiceless CL + [kx'] [x] [h]

to wipe: gʔhu (E1 & E3) vs. ʔhu (Naro)

to urinate: glxam (E1 & E3) vs. lxam (Naro)

to wash: gllkx'a (NW !Xun) vs. llkx'a (Naro)

to trip: g!!xaba (NW !Xun) gʔxaba (E1) vs ʔxaba (E3 & Naro)

Preliminary Conclusions:

Convergence between E1 & E3: unlike with simplex clicks, complex click clusters in ꞤX'ao-ll'aen do not undergo lenition.

Divergence between Kx'a and Naro: Naro has a much smaller click inventory compared to Kx'a lects with a plain voiced series or a CL + accompaniment series, but not both.

Despite extreme contact situation (lexical diffusion) there is no reason to believe that the E3 click inventory has undergone reduction.

= lexical diffusion from Kx'a → Naro

Diffusion across region: example of [gllkx'a]

'to wash': gllkx'a (Northwestern !Xun) → llkx'a (Jul'hoan, †X'ao-ll'aen, Naro) → ll'a (Nama)

'wash' [llkx'a]

**Divergence in abrupt vs. noisy clicks with [kx'] accompaniment
- intermediary step in assimilation of uvular fricative by lateral click?**

'hair' [!kx^ʔuisi]

hair_GRL

'to stink' [llkx^ʔu]

the_meant_stinks_GRL

Summary:

- Considerable lexical diffusion between *SE Ju dialects* and *Naro*
- Handful of shared morphosyntactic morphemes:
 - > interrogative marker: *ba xae* (<Naro?)
 - > conjunctions: *khama* (because), *kana* (or)
- BUT, stable inventory of click stops
 - > no reduction in click inventory for even shared lexical items
- Data from “bias community” but results representative of larger picture

Q: Is above phenomena contact induced or inherited?
